

Consent for Research Participation

Research Study: Identifying information and data needs for pandemic preparedness in Belgium – Study within the Belgian Pandemic Intelligence Network (BE-PIN)

Researchers: Dr. Barbara Tornimbene and Dr. Wim Van Bortel, ITM, Antwerp

Dear colleague,

You are invited to take part in a **study on information and data needs for epidemic preparedness in Belgium**, which is conducted by Sciensano and the Institute of Tropical Medicine (ITM). We are inviting people to complete this survey to gain more insight into information and data needs for epidemic preparedness in Belgium.

We are reaching out to you today because you have been referred to us as having experience in dealing with epidemics of xxx (here add the target scenario), specifically from a decision-making or policy advice perspective.

The information in this consent form is to help you decide if you want to be in this research study. Please take your time reading this form and contact the researcher(s) to ask questions if there is anything you do not understand. Only once you have read the information be useful low and explicitly accepted to participate will you be able to access the full survey.

Why is the research being done?

Sciensano and ITM are leading a work package on collaborative surveillance within the Belgian Pandemic Intelligence Network (BE-PIN). Within this work package, we aim to identify information needs for different decisions that might have to be taken during an epidemic. Based on these information needs, we then want to highlight data needed to be able to provide that information. The project will allow to work towards better access to data, more advanced analytical capacities, and tailored tools providing important insights for decision-making and communication at federal and regional levels.

As someone who has directly worked with epidemics, as a decision-maker or policy advisor, we want to hear your expert opinion of information needs for better preparedness and response to epidemics. Your answers will be combined with answers from the other XX participants that we have reached out to and will feed in a comprehensive list of decisions and information needs specific to an epidemic of xxx (here add target scenario). This comprehensive list will in turn help us identify what data are needed and currently missing from routine data collection and which data collection systems should be put in place to prepare for the next epidemic of xxx (here add target scenario).

This study is being conducted by researchers at the Institute of Tropical Medicine, ITM, Antwerp, and Sciensano. ITM and Sciensano are receiving funding from BELSPO to conduct this study. Note that this study was reviewed and approved by the Institutional Review Board of the Institute of Tropical Medicine in Antwerp.

What will I do in this study?

If you agree to be in this study, you will complete an online survey. We have identified different possible sets of decisions that one might have to make at different stages of an epidemic. We would like your feedback on these sets of decisions: do you agree with the suggested decisions? Would you add other decisions to the list? For each set of decisions, we will also ask you about information needed to make that specific decision.

It should take you about 30 minutes to complete.

Can I say "No"?

Being in this study is up to you. You can stop and quit the survey at any time until you submit your answers. After you submit the survey, we cannot remove your responses because we will not know which responses came from you. Either way, your decision won't affect your work or professional position.

Are there any risks to me?

There should not be any risk to you. Answers are expertise-based and are not personal in nature.

Are there any benefits to me?

We do not expect any direct benefit to you from being in this study. However, your participation will help us work towards better access to data, more advanced analytical capacities, and tailored tools providing important insights for decision-making and communication at federal and regional levels. This is likely to positively impact your work in the future.

What will happen with the information collected for this study?

At the end of the survey, you will be asked if you want to participate in focus group discussions to further discuss your answers with other stakeholders. Only if you reply 'yes' to that question will we collect your name and contact information.

You will also be asked if you want to participate in other similar surveys for vector-borne diseases and other human-to-human transmitted diseases. If you do not want to receive similar surveys, we will collect your contact information.

The rest of the survey is anonymous, and when data will be retrieved from the survey server, your name and contact information will be separated from the rest of the answers. It will be stored separately from the rest of your answers, and researchers will not be able to link your answers to your contact information. No one will be able to link your responses back to you. Your responses to the survey will not be linked to your computer, email address or other electronic identifiers. Please do not include your name or other information that could be used to identify you in your survey responses otherwise. Information provided in this survey can only be kept as secure as any other online communication.

If you give your contact information for participation in focus group discussions, it will be only accessible to the investigators of this study, unless you agree to us sharing it with specific researchers within the BE-PIN network. The BE-PIN network is composed of several work packages, and other studies within the network might want to organize interviews with you. In order to not overload you with requests, we ask your consent to share your contact information if you agree to participate in the focus group discussion, so that you do not receive too many other requests to participate in interviews from other BE-PIN studies.

If you know anyone else who should receive this survey, you have the possibility to mention it in the survey and recommend their names. This will allow us to reach more experts on the topic and build a strong framework.

We will do everything we can to protect your privacy. Your data will be processed in accordance with the European General Data Protection Regulation (GDPR) and with the Belgian legislation on the protection of natural persons with regard to the processing of personal data. The coordinator of this study, that is Institute of Tropical Medicine, acts as data controller for your data. The lawful ground for the processing of your personal data is the public interest. In accordance with the European Data Protection Regulation (GDPR), you may request access to and correct your personal data if needed. If you have any questions relating to how your data are being processed, you may contact the investigator. Also the data protection officer of ITM can be contacted (email: informatieveiligheid@itg.be or tel. 03 247 07 43).

Information collected for this study will be published and possibly presented at scientific meetings.

Will I be paid for being in this research study?

You will not be paid for being in this study.

Who can answer my questions about this research study?

If you have questions or concerns about this study, you may contact Dr. Barbara Tornimbene or Dr. Wim Van Bortel by email (btornimbene@itg.be or wvanbortel@itg.be).

Your participation in this study is entirely voluntary and if you choose to participate, we warmly thank you for your time and your input!

Statement of Consent

*

I have read this form, been given the chance to ask questions and have my questions answered. If I have more questions, I have been told who to contact. By selecting "I Agree" below, I am providing my signature by electronic means and agree to be in this study. I can print or save a copy of this consent information for future reference. If I do not want to be in this study, I can select "I Do Not Agree" to exit out of the survey.

- ☐ I do not agree to participating in the study
- ☐ I agree to participating in the study

Thank you for your time. You can now click on "Submit" and close this page.

INTRODUCTION TO THE PROJECT

The overall purpose of this survey is to identify the pieces of information that are critical for decision making during the different stages of a pandemic due to a respiratory pathogen (ex: COVID-19, Pandemic flu...).

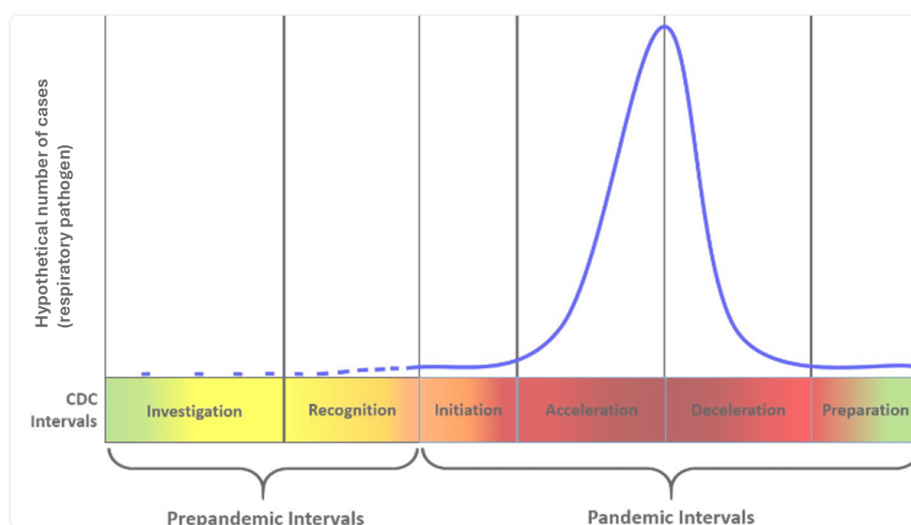

You will first be asked to select topics that you have expertise in. Based on that selection, we have identified different possible sets of decisions that one might have to make at different stages of an epidemic. We will ask you to comment on these decisions. For each type of decision, we will ask you about information that you would need to be able to make that decision or give advice on that decision. The pre-set list of decisions and information needs was drafted based on a combination of WHO guidelines for pandemic preparedness and BEPIN's consortium own set of expertise. Your input will support us in adding decisions and information needs to this draft table: [LINK](#).

Your answers should be based on an ideal world where all information and data is available/accessible. The final list, which aims to be exhaustive, will help identifying relevant information needed for each stage of a pandemic and will help target future data collection processes to be more efficient.

We are focusing on epidemics of **respiratory pathogens**.

In order to structure the questions, we have defined 5 phases of an outbreak, based on the CDC's framework for influenza. The phases, shown in the figure below, are defined as:

- 1) **Pre-pandemic phase:** Investigation of ad hoc cases and recognition of potential for human-to-human transmission
- 2) **First 100 cases:** Initiation of the epidemic wave
- 3) **Exponential growth phase :** Acceleration of the epidemic wave
- 4) **Control and stabilization phase:** Deceleration of the epidemic wave
- 5) **Preparation phase:** preparation for future epidemics (including endemic phase management and evaluation)

The types of decisions are not only defined by phase of the epidemic, they are also categorized into three types:

Monitoring and surveillance involve continuously assessing and adapting strategies to detect, evaluate, and respond to health threats. This includes testing policies, case definitions, risk assessment, lab and diagnostic capacity, and structural improvements for outbreak preparedness.

Clinical and medical aspects include stockpiling medical supplies, prioritizing patient care, preventing healthcare-associated spread, evaluating treatment strategies, improving drug availability, and developing guidelines for long-term effects and sustainable healthcare integration.

Prevention and control include stockpiling personal protective equipment, developing and deploying pharmaceutical and non-pharmaceutical interventions, adapting travel and movement policies, providing social support, and enhancing public health literacy to prepare for future epidemics.

Which of the following topics do you usually work with? *

Monitoring and surveillance involve continuously assessing and adapting strategies to detect, evaluate, and respond to health threats. This includes testing policies, case definitions, risk assessment, lab and diagnostic capacity, and structural improvements for outbreak preparedness.

Clinical and medical aspects include stockpiling medical supplies, prioritizing patient care, preventing healthcare-associated spread, evaluating treatment strategies, improving drug availability, and developing guidelines for long-term effects and sustainable healthcare integration.

Prevention and control include stockpiling personal protective equipment, developing and deploying pharmaceutical and non-pharmaceutical interventions, adapting travel and movement policies, providing social support, and enhancing public health literacy to prepare for future epidemics.

☐ Monitoring and Surveillance

☐ Clinical and Medical aspects

☐ Prevention and Control

Surveillance and monitoring

Which of the following decisions does your work relate to? *

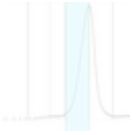

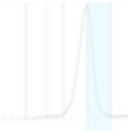

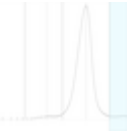

Select a maximum of 5 answers (select the topics that you work at least 20% of your time on)

- ☐ Decide whether and how to set-up/adapt surveillance systems (ex: set up testing policy, case definition, lab standardization)
- ☐ Assess the risk of introduction of a respiratory pathogen
- ☐ Assess the risk of spread once the pathogen is introduced in Belgium
- ☐ Decide when to declare a state of emergency
- ☐ Assess and prevent possible risk of reverse zoonosis
- ☐ Strengthen laboratory capacity
- ☐ Strengthen hospital capacity
- ☐ Strengthen epidemiological, clinical and diagnostic research capacity
- ☐ Strengthen data communication capacity
- ☐ Decide on the best diagnostic tools and testing strategy to use
- ☐ Be proactive in policy preparation
- ☐ Participate in communication of research and data to the media/public
- ☐ Assess the risk of spread of any possible resurgence of the pathogen
- ☐ Optimize surveillance and governance in preparation for the next pandemic

Are there other decisions (not listed) that your work relate to? *

- ☐ Yes
- ☐ No

» Response options

In the pre-pandemic phase	For the first 100 cases	In the exponential phase	In the control and stabilization phase	In the preparation for future pandemics phase
				

» » Would the following information be useful to decide whether and how to set-up/adapt surveillance systems (ex: set up testing policy, case definition, lab standardization)?

Description of who is initially being affected by the pathogen

Is this information useful *

- ☐ No
☐ Yes
☐ Depends on other available information
☐ No opinion

For which stage(s)? *

- ☐ In the pre-pandemic phase
☐ For the first 100 cases

Are there any other information needs that you deem essential to optimize surveillance and governance in preparation for the next pandemic? *

☐ Yes

☐ No

If so, which ones and during which phase(s) of the epidemic? *

» Other topics of decision-making

Which other decisions does your work relate to, and which information would you need in that context? *

Clinical and medical aspects

Which of the following decisions does your work relate to? *

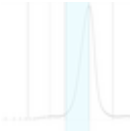

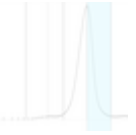

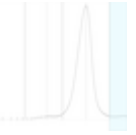

Select a maximum of 5 answers (select the topics that you work at least 20% of your time on)

- ☐ Assess medical countermeasure availability and stockpile
- ☐ Evaluate and prioritize healthcare capacity (ex: prioritize patients, triage rules, number of beds)
- ☐ Evaluate and optimize systems to prevent spread in healthcare settings (ex: quarantine systems..)
- ☐ Decide if medical countermeasures should be continued/scaled-back/intensified
- ☐ Optimise resource allocation to alleviate the burden of the epidemic on the healthcare system
- ☐ Create guidelines on needs and means for treatment (including treatment of long-term effects)
- ☐ Improve availability of drugs including new, more effective ones
- ☐ Create guidelines for sustainable healthcare integration
- ☐ Be proactive in policy preparation
- ☐ Participate in communication of policy decisions to healthcare professionals
- ☐ Participate in communication of policy decisions to the media/public

Are there other decisions (not listed) that your work relate to? *

- ☐ Yes
- ☐ No

If so, which ones and during which phase(s) of the epidemic? *

» Other topics of decision-making

Which other decisions does your work relate to, and which information would you need in that context? *

What were the three most important information needs that you had for your advising/decision making role during the COVID pandemic? (Write NA if not applicable) *

Would you be willing to participate in focus group discussions with other stakeholders to further discuss the results of this survey? *

☐ Yes

☐ No

If so, could you provide us with your name and preferred contact information? *

Do you agree to us providing your name and contact information to other members of BEPIN in order to better coordinate interviews and focus group discussions? *

Only your contact information would be shared, not your answers to this survey. Refusing to do so doesn't impact your agreement to participate in focus group discussions.

☐ Yes

☐ No

We will be sending two other similar surveys in several months to enquire about epidemics of vector-borne diseases and other human-to-human transmitted diseases. If you already know that you do not wish to be contacted for other similar surveys, you can indicate so here by ticking this box. *

☐ I do not wish to receive similar surveys

If so, could you provide us with your contact information so we remove your from the sending list? *

Thank you for your participation!
